April

Hop to it, get outside

- If soil test results indicate the need, amend your soil. Organic products are best.
- Tolerate some weeds in your yard; they are not the enemy. Plant biodiversity in your lawn provides food for pollinators and beneficial soil organisms. If you must remove weeds try these non-synthetic chemical approaches.
  - Apply corn gluten meal to prevent annual weed seeds from germinating
  - Spot treat existing weeds with an organic weed control product that contains molasses or liquid iron
  - Hand-pull weeds. Purchase a tool to help, like a Speedy Weedy, or encourage your children to pull!

Did you know?

Don’t leave fertilizer pellets and grass clippings on your driveway and other hard surfaces! They wash into streams and rivers, blocking water flow and adding unwanted nutrients. Aim your mower so grass clippings stay on the lawn where nutrients are needed!
