GIVE DAD A BREAK

- Brown-yellow dormant grass is normal during summer’s heat. If you require a green lawn during this time:
  - Water deeply, 1 inch of water 2 times a week
- Relieve lawn stress by applying gentle, slow fertilizers like: compost, compost tea or sea kelp. Synthetic, chemical, high-nutrient fertilizers increase stress on lawns.
- Read the weeds for a healthy lawn. Every weed tells a story and gives clues about lawn conditions. Learn to identify weeds and react accordingly.

DID YOU KNOW? Dandelions are not native to North America. Early European colonists brought dandelions over as a source of food and medicine. Dandelion greens are highly nutritious: containing more Vitamin A, K, Calcium and Iron than broccoli per 1 cup serving.
